- Setting in operation an optic fiber network, based on DWDM technology

- Building of SDH–Network
- Building of MPLS–Network
- Support of DWDM and MPLS Network

- Basic ring digital transport network
- Improvement of backbone network with use of DWDM and MPLS technologies

- Installation of SS7 Signal Controller (PGW 2200)

- Building of DWDM-Network

- Designing of 3G/UMTS networks
- Building corporate multi-service packet network
- Installation of SS7 Signal Controller (PGW 2200)

PrioCom always **provides several alternatives** for solving one and the same problems due to our knowledge and experience acquired in the course of work with various manufacturers.

In contrast to many technological companies **PrioCom** does not adhere strictly to a certain technology or manufacturer.

The distinctive features of Company's work with the projects are absence of predetermined decisions, objectivity, independence of the certain products. The main for the Company's experts is to find the solution that meets the customer's requirement.
